SUMMARY

Infrastructure Engineering Lead with 11+ years building and leading high-performing teams across multi-cloud environments (AWS, Azure, GCP). Proven track record managing teams of 5-7 engineers through full product development lifecycles from design and implementation to observability, release strategies, and incident management. Expert in Terraform and Crossplane based infrastructure automation, CI/CD, and creating seamless developer experiences. Delivered \$500K+ in cost optimization and built scalable platforms supporting 50+ microservices. Adept at coaching engineers, driving technical excellence, and partnering cross-functionally to align infrastructure with business outcomes.

EXPERIENCE

Senior Platform Engineer

A.P. Moller - Maersk

January 2024 - Present, Remote

- Built and managed a fully-remote, geographically distributed team of 5 infrastructure engineers across multiple time zones, leveraging asynchronous communication and written documentation to drive alignment, decision-making, and collaboration—achieving 95% on-time feature delivery.
- Oversaw hiring, onboarding, sprint planning, architecture decisions, and individualized career development, fostering team ownership of the product roadmap and empowering engineers to drive technical excellence.
- Coached engineers on product thinking, software engineering quality, and DevOps best practices, creating growth plans aligned with team goals and business priorities.
- Led multi-cloud infrastructure strategy across AWS, Azure, spearheading the design and deployment of scalable, secure infrastructure supporting 50+ microservices workloads aligned with enterprise cloud strategies.
- Developed 20+ Terraform modules and Crossplane CRDs for multi-cloud provisioning, standardizing infrastructure as code and improving provisioning efficiency by 40% across AWS, Azure, and GCP environments.
- Architected custom Kubernetes CRDs and Crossplane compositions, enabling self-service infrastructure provisioning and improving developer velocity and developer experience across multiple cloud providers.
- Integrated GitHub Actions and Flux CD pipelines, accelerating release cycles and reducing manual deployment effort by 40% across 10+ projects.
- Drove performance, security, and reliability improvements across multi-cloud environments, cutting downtime incidents by 25% and ensuring high availability.
- Implemented GitOps with Flux CD, reducing configuration drift by >90% and ensuring consistent deployments across AWS, Azure, and GCP.
- Leveraged AKS, HashiCorp Vault, and Boundary to strengthen security posture, reducing manual credential handling by 80%.
- Deployed observability and monitoring tools (Komoplane, Helm Dashboard, Capacitor UI, Prometheus, Grafana), reducing MTTR by 35% and enhancing incident management capabilities.
- Partnered with cross-functional teams including Product, Security, and Platform Engineering to align infrastructure roadmap with business objectives and drive 2 successful enterprise-wide platform rollouts.
- Guided PoCs for emerging tools and architectures, influencing long-term multi-cloud platform strategy and technical decision-making processes.

Senior Member (Technical Staff)

Salesforce India Pvt Ltd

October 2021 - December 2024, Bangalore

- Managed and coached a team of 3 DevOps and infrastructure engineers, conducting 1:1s, building individualized growth plans, and mentoring on product thinking, software engineering best practices, and technical excellence—achieving 95% on-time delivery and 25% improvement in team velocity.
- Led team through full product development lifecycle including design, implementation, end-to-end testing, observability, release strategies, and incident management for Java microservices and Spring Boot applications on AWS and Kubernetes.
- Optimized AWS EC2 infrastructure through rightsizing initiative, delivering \$500K+ in annual cost savings while maintaining performance and reliability across multi-cloud environments.
- Partnered cross-functionally with Product, Engineering, and SRE teams to coordinate cross-cutting CI/CD initiatives, ensuring alignment on tooling standards and deployment strategies across 10+ active projects.
- Built and optimized CI/CD pipelines with Docker, Kubernetes, GitHub Actions, Helm, and Flux CD, reducing deployment time by 40% and cutting release cycles by 30%.
- Deployed and optimized Spinnaker pipelines for Kubernetes, ensuring consistent delivery with >95% pipeline success rate.
- Architected and maintained Kubernetes clusters on AWS and multi-cloud environments, supporting multi-team workloads and enhancing scalability and reliability.
- Designed scaling strategies and automation scripts, reducing infrastructure incidents by 25%.
- Applied security and performance best practices in Kubernetes environments, cutting vulnerabilities by 15%.
- Created Grafana and Prometheus monitoring dashboards, reducing MTTR by 20% and strengthening observability across AWS, enhancing incident response capabilities.

DevOps Engineer

SAP Labs India**April 2018 - October 2021, Bangalore**

- Managed multi-cloud infrastructure operations across AWS, GCP, Alibaba Cloud, and SAP Converged Cloud, ensuring 99.9% uptime through proactive OS patching, upgrades, and resolution of critical Linux server issues (DNS, LDAP, Apache, NFS, object storage).
- Coached and developed junior engineers on cloud operations, Terraform automation, and incident management, fostering a culture of knowledge-sharing, continuous improvement, and technical excellence.
- Led 5+ full-scale data center builds across SAP Converged Cloud, AliCloud, AWS, and GCP, deploying core infrastructure services (DNS, LDAP, mail, repo sync, central gateway) and establishing operational best practices.
- Performed SLES migrations (11 → 15) across hybrid cloud environments, modernizing infrastructure and reducing operational risks by 20%.
- Built and managed automation pipelines with Chef and Ansible across AWS, GCP, AliCloud, and OpenStack, reducing deployment errors by 40% and improving release efficiency.
- Monitored and optimized Linux clusters with Nagios, automated patching via BMC, and applied OS hardening, cutting vulnerabilities by 15% and strengthening security posture.
- Architected and automated repetitive operational tasks, improving release efficiency and reducing manual workload by 30%.
- Oversaw AliCloud services (SLB, NATGW, Object Store/Bucket), improving storage efficiency by 25% through policy optimization and account management.
- Provisioned dev environments across Azure, GCP, AWS, AliCloud, and OpenStack, cutting onboarding setup time by 50% and improving developer experience.

System Engineer**Tech Mahindra Limited****June 2014 - December 2016, Chandigarh**

- Automated and optimized UNIX and database scripts/processes, improving operational efficiency and reducing manual interventions by ~25%.
- Led client requirement gathering and managed L2/L3 production support, deploying new processes, implementing changes, and enhancing critical business applications.
- Administered Linux-based firewalls, handling rule-based internet access, port management, and intrusion detection/troubleshooting, strengthening network security posture.
- Configured YUM, FTP, and NFS servers to enable automated remote Linux installations and application deployments, reducing setup time by ~40%.

EDUCATION**B. Tech. in Electrical and Electronic Engineering**BPUT • Odisha • 2013 • 7.0

CERTIFICATIONS

Microsoft Certified Trainer (MCT Azure)

MS Azure Security Engineer AZ 500

Google Cloud Certified Professional Network Engineer

RedHat Certified System Administrator (RHCSA)

Red Hat Enterprise Linux 7.0

Terraform Certified Associate

Google Cloud Certified Professional Cloud Architect

Alibaba Cloud Certified Cloud Security Associate

MS Azure Administrator AZ 103

ITILv3/4 Foundation

Certified Kubernetes Administrator (CKA)

Google Cloud Certified Professional Cloud Developer

MS Azure Fundamentals AZ 900

Certified in Cybersecurity (CC) By ISC2

Vault Certified Associate by HashiCorp

Google Cloud Certified Associate Cloud Engineer

Alibaba Cloud Certified Cloud Computing Associate

Google Cloud Certified Professional Security Engineer

SKILLS

Cloud Strategy & Architecture, Cloud Transformation, Multi-Cloud Management, Azure, Cloud Solutions, Cloud Architecture, Kubernetes, AKS, SAP Converged Cloud, Google Cloud Platform, OpenStack, AWS, Alibaba Baba Cloud

Linux/Unix servers, DNS, LDAP, APACHE, Web Servers, NFS, object store issues, Chef, Ansible

Java Microservices, Spring Boot, Docker, Helm, Argo CD, Spinnaker

DevOps, CI/CD Orchestration, Automation, Scripting, Go, CI/CD, GitOps
